- MongoDB
- Redis
- Docker
- Git
- Microsoft Office/LibreOffice
- Driving license

LANGUAGES

- Polish (Native)
- English (C1)

EDUCATION

Bachelor's degree in Computer Science (Engineering)

Lublin University of Technology (Politechnika Lubelska)

2022 - present

ABOUT ME

I'm a self-taught developer from Poland, consistently growing toward a fullstack role. I build modern web applications with a focus on security, clean code and great user experience.
I primarily work with Node.js, TypeScript and Go, using technologies such as Next.js, Hono and PostgreSQL.

PROJECTS

My projects that I'm most proud of.

DoggoPaste
A web application and API for sharing code via link and collaborating in real time. Includes a mechanism for detecting sensitive content like "password" or "secret".

Homeserver
Documentation of two iterations of my home server setup: one using Cloudflare Tunnel, the other using port forwarding. Both include step-by-step guides for selfhosting.

Nuntius Feed
An app for subscribing to various RSS and Atom feeds in all versions, browsing new entries, saving them for later and filtering by language or keywords.

Sayuna
A modular Discord bot featuring music control with a live panel, administration and moderation tools as well as entertainment and AI-based commands.

HOBBIES

I'm interested in selfhosting, programming, exploring new technologies and tech news. Outside of IT, I enjoy skiing, history, karaoke, video games, cooking and spending time with animals.
